

Do you want to help improve things?

If you do you, we thinker-doers welcome you. Many of us want to improve conditions for humans and some animals. A person having concern for or helping to improve the welfare and happiness of people, or the saving of human lives or to the alleviation of suffering, is called a humanitarian. Most children when they see suffering want to alleviate it. It appears that it is basic human nature that humans are humane (monsters psychopaths and sociopaths aren't). Einstein stated the mankind will suffer because of those who see bad things and do nothing. Sadly many people appear to not care.

The following are a few ideas that are important and are worthy of promoting. First a 3 page summary followed by 6 pages of information if you can take the time. I do value your opinion and would like to hear how you feel about some of these. Let me know your opinions on these when you get time. Be honest If you think I am wrong please let me know. Thank you.

Summary

The following information is based on research and verifiable facts. At first you may feel some of it is wrong but it is not. The news media are controlled by powerful groups who often suppress some news. The truth also seems wrong to those who hate the truth. I guarantee everything here is based on facts and research. Most humans and cultures and even peoples on remote isolated islands and most ordinary people in the past and today except the Muhammad Cult, follow the Golden Rule. Jesus put it Do unto others as you would want others to do unto thee, Socrates put it in the form of the Silver Rule Don't do to others what you would not want done to yourself. Confucius said What you would not want done to yourself don't do to others. Most of the great thinkers and leaders and religions also expressed this as the best way to get along with others. One of the few exceptions is Muhammad who left the Golden Rule out of the Quran. If you look at the best biographies about him such as the 800 page Ibn Ishaq's biography he did the opposite both by his example and by his teaching. Because of warriors and other power seekers human history is full of wars and battles. We now have rule by law not by brute force and we now have law enforcement and 911 with armed police to stop most violence but it is almost impossible to stop terrorist bombs in vehicles or trash cans as the Islamic Marathon Bomber used killing innocent children and other non believers (as ordered in the Quran verse 9-5 and others, and guaranteed the bomber a spot in paradise verse 9-111 and other verses) This sounds wrong but you have to first understand this is a self centered world domination cult doing things that are opposite what we consider normal behavior of the Golden Rule and following the terrible example Muhammad set as the standard. See notes below. And everything here you can verify yourself by reading the Quran and the biographies.

There is a famous picture of two civil war soldiers each running their bayonets through the other. Both are standing there in great pain realizing that they are both going to die and realizing they did it to each other. These two men had nothing against each other, perhaps both had families. They both may have had children. If they could have met in a café and had coffee together and discussed with each other they would have most likely realized that killing each other did not solve any problems. But because of lack of communication they just followed orders of power-hungry leaders or politicians to kill each other. Do you see that if people can communicate with each other using a common language they can usually solve problems through discussion, mediation, fact finding etc. all much better than killing. Taking time to communicate and find solutions is important in many cases a matter of life and death.

The situation of the person who is trying to give needed information to a doctor or policeman but doesn't speak their language has cost many lives. A mother of a 3-year-old was in Naples Italy in a public square when a man snatched her child. She screamed finally an Italian policeman came to her, but she knew no Italian and he knew no English so in the interim the baby snatcher got away before someone was found to translate. **Humans need to understand each other especially in emergencies** that is why International Vocabulary of which you already know 2000 words should be taught in all schools around the world. Humans should be able to understand each other with a common language such as International Vocabulary which is nicknamed Esperanto, (no it is not Spanish). Encourage all to learn it in 10 minutes a day to eliminate language barriers. Only 16 rules of grammar with no exceptions. No irregular verbs. Uses easy prefixes to make learning easy. Like help rehelp, malpractice malhelp means hinder. Mal turns any word into the opposite. ist at the end of a word makes it into a profession. Dentist, Pianist All prefixes like re and mal work with any word that makes sense saving you 100s of hours of study. After a month you can have actual conversations with people from

over 100 countries who have also learned the most basic 300 words that are in most conversations. See my website <http://easiestlanguage.info>

In 2020 thousands died because of a virus that jumped from animals to humans thru carelessness in China. Science already knew of the seriousness of these corona viruses, but not enough research had been done on them to be prepared in case one got transferred to humans again as has happened 5 times already. (SARS, N1, B814, HKU1, OC43) **Had we had done more research perhaps thousands of lives could have been saved.** It could have been contained and people treated with antibodies. But governments chose to make spend money on military rather than do medical research. We can learn from history if we will just pay attention to it.

The Bots are coming! Computers have increased in power and decreased in size so that soon the fones (modern spelling) will fit into a pair of glasses or be worn on our wrists or on clothing and may be implanted in our bodies to provide us with additional capabilities and information. Bots (automatic computer programs) will do little jobs like tell us the weather forecast or order pizza and bigger ones will replace “experts” in many fields and many white-collar executive positions. Expert projections tell us to expect to see 60% of current jobs automated by bots and robots in the next decade and upwards of 90% within 60 years. Very few new jobs will be created. Fast food places are now replacing people with kiosks and food making machines. There are bots or robots for brick laying, painting, fruit picking, cotton picking, harvesting crops, stocking store shelves, taking inventory, making & serving coffee drinks, bank tellers, hardware and store clerks. Automation taking over most work will free up humans for a wonderful creative life with endless wonderful possibilities of things to do and enjoy. Computers in cybernetic systems will be running most things more efficiently and this will free humans from having to work. But millions of people will be put out of work with few new jobs created. These people will need income. Welfare is not a long-term option so what can we do? **Here is a solution.** Set up solar panels nationwide using low cost and or prisoner labor. These panels will then daily generate a lot of nearly cost free electricity which can be put on the grid or stored in batteries all of which can be sold to industry and electric companies. This means we can also close down the polluting coal burning plants that have to pay for coal. Give every citizen an equal financial credit from the huge profit from selling this free energy, thereby giving each citizen a basic income. Make the greedy corporations buy this sun energy, not sell it. There is ample solar energy that hits the USA every day to provide much more than we need even including giving us free fuel for everyone's electric cars. Tell congress to start making this happen. But the US Congress no longer represents the American People, rather they work for corporations and have been accepting millions in bribes from corporations. (It is the dirty secret of Congress.) Corporations get tax loopholes and huge subsidies with our hard-earned tax dollars costing us billions. That is called corporate welfare. Congress should be term limited to one term only, with no special pensions or special health care.

Autonomous cars drive us places much more safely than human drivers and will talk with other autos. Human drivers kill thousands of innocent humans every year. This will be a big convenience because one can read watch videos or listen to music on while traveling. But It will also put 3 million professional drivers out of work.

I teach technology at a college. My textbooks started saying 4 years ago that 60% of most jobs will be replaced by automation soon. It is happening now. Thousands are losing their jobs but very few new jobs are being created. Machines will be doing most retail jobs. Computers with AI will be replacing many lawyers, doctors, technicians, and other skilled workers. Our local GM factory had 3000 workers, now has under 200. Work is now being done by robots.^[125] Watson an IBM computer is now the best practicing doctor in the world. That is the one who beat the smart humans in Jeopardy. Watson is 30% better than human doctors because it can read and act on every medical study and the results of best practices and check all drug interactions, whereas a human doctor does not have the time or capability to do this. Because of the increasing general practice doctor shortage which has been caused by so many people suing doctors causing many new doctors to avoid the risk going into general practice. So you will see more and more nurse practitioners holding a cell fone with Watson on it who is the doctor asking the questions and prescribing treatment.

A Pharmacy machine in California has filled over 200 thousand prescriptions without an error, while also checking drug interactions. It works 24/7 without pay. Now pharmacy machines are being put in all over the USA replacing humans.

RFID computer chips can be the size of a tiny grain of sand that send out a long number when they are hit with a radio frequency signal, from a doorway or a hand scanner. So a person going thru the door can be

identified or merchandise put on a counter or identified by a hand scanner just like the barcode hand scanners at the grocery store do now. Newer RFID chips can also be as small as powder and can be sprinkled on crops such as lettuce, or put in pills, foods, products, clothing and almost everything. This makes nearly everything trackable and identifiable. This can be good for restaurants being able to see if they have a bad batch of lettuce. This makes theft awareness and prevention much more efficient in stores because when a thief walks out of the store with an unpaid for item an alarm can go off. There are RFID chips to put in animals or in a spouse's possessions which can be trackable. What could be bad, is now Big Brothers (Corporations and Governments) may now be able to track almost everyone. They already record all Internet use, fone use, locations, all financial information and even face recognition from cameras in computers and in public places, and this data may be fed into Big Brother's databases. It is becoming easier for Big Brothers to keep track of everyone. This is already being done in China when if a person even jay walks their rent can go up. People who say anything the state does not like can be punished. Some people have disappeared. This has happened in history many times especially under dictatorships any dissidents were just removed tortured and eliminated. Please read the 1949 book named 1984 by George Orwell. Is scientific dictatorship possible? See the movie "Enemy of the State." Could social control by Big Brothers potentially happen? Well look at China today Big Brother now runs most citizens lives. Privacy has been virtually abolished. Freedom of speech is still possible but if they speak against the leaders they may pay dearly.

Your implanted RFID chip will allow you to make purchases without money and will unlock your car or house upon your approach. Paper money is being replaced by electronic money (which might be controlled by Big Brothers.) Very little is now purchased with paper money which is no longer backed by gold or silver and may become nearly worthless as the federal government is so over its head in debt that it can barely keep up its payments to China who bought much of its debt. China now uses our debt payments to finance its military which may surpass the US military. China educates its bright children while the USA has cut education so much that the US kids are actually behind children in most other countries in education. In fact, the US no longer produces enough engineers to meet its needs and has to import foreigners to fill positions.

Being a professional educator and having taught at every grade level, private schools and college level, I know things that need to be corrected in the U.S. education system. First teach the basics of the most needed subjects including science and history. Have a graduation final exam of 100 questions from a pool of 1,000 most important needed bits of knowledge that they should know to get a high school diploma. Such as how does one stop bleeding? What special precautions have to be used around gasoline? Too many students are wasting valuable time goofing off in school because they are not held accountable to learn. I did a survey over several years and found that less than one half of high school seniors could answer the above two questions or why they should not ingest unprescribed drugs or could tell me who we fought in WWII and why. And employers complain all the time that new hires can't make change for a \$20 bill without a calculator. This is proof our education system is lacking.

Why not Create a Better Future. People looked at history and learned from it, used their imagination and science and created better things like cures for diseases, medicines, smart fones, fast weather proof subways that can get you within a block of a destination and fold up sit down scooters that can easily get you the rest of the way.(some cities have scooters for rent by the minute) Those things have already been created we just need to make it happen here. Big machines already can do hard work (fork lifts, diggers, back hoes) and there are now big machines that can dig the tunnels and create the cement walls for subways. We have thousands of nonviolent people in prisons who could be put to public service work and learn job skills in the process which they can use when they get released allowing them to become self-sufficient productive tax paying rather than tax using citizens.

Subways are more efficient, faster, safer, run in all weather and no longer require drivers so are less expensive to run than buses and trains. Small subway cars are called pods and you can tell it where you want to go so you don't even need to transfer cars. You can read, watch videos or listen to your choice of music instead of fighting traffic or dealing with parking hassles. It is a better, safer and faster way to travel. Building them would create jobs. And they provide refuge in case of tornadoes, hurricanes attacks.

What is the most efficient personal transportation method? Electric cars, golf carts, and electric scooters have been proven to be more efficient and need much less maintenance, and can get free fuel (solar power from solar panels). There are not enough charging stations around the country because of the greedy manufacturers

of outmoded gasoline engines used today so the answer for the short time is hybrids or solar charging. A small gasoline engine keeps the batteries charged. The batteries also charge when the car brakes, so it is much more efficient. Electric scooters and golf cart like vehicles have proved to be very efficient. Some scooters fold up into luggage. And again they can **GET FREE FUEL.** Charge these up for free with on vehicle or home solar panels as SOLAR POWER is FREE, inexhaustible, clean, and panels are guaranteed for 25 years. Do It Yourself for under \$99. to charge fones, have lights, run tablet computer. To run laptop and TV add \$100 for bigger power unit. Everything is easy just set panel in window and plug in to battery-power unit. Only two items to buy Solar panel and battery-power unit which includes battery, charge controller and inverter for AC. Panels can also be outside on a rack made of cheap PVC pipe with zip ties to fasten panels.

You can make a difference in improving things. You feel happy, when you help make a better world. Much is really easy to do such as: Promote the idea that the Golden Rule should be the expected conduct for all humans, with the expectation that one must not bring harm to another by one's actions or inaction. Hurting others is no longer acceptable in today's world. Make it the expectation that all humans are expected to act responsibly and take positive action to improve the life of all humans. Promote the expectation that Humans are Humane. We should circulate these and other good ideas.

End of Summary

Most human cultures from early tribes, peoples on remote isolated islands, the majority of **humans usually adopt the principal of reciprocity** (Golden Rule) Jesus put it Do unto others as you would want others to do unto thee, Socrates put it in the form of the Silver Rule Don't do to others what you would not want done to yourself. Confucius said What you would not want done to yourself don't do to others. Most of the great thinkers and leaders and religions also expressed this as the best way to get along with others. One of the few exceptions is Muhammad who left the Golden Rule out of the Quran. If you look at the best biographies about him such as the 800 page Ibn Ishaq's biography he did the opposite both by his example and teaching. He made himself important ty telling others God spoke to him often but this attracted few followers. After a decade of failure to attract followers but he found several powerful tools that worked so well that he became one of the most rich and powerful men in history. The first tool was convincing his followers that they were commanded by God to wage war (jihad) to expand their cult. which led to them making a living by attacking other groups and peaceful villages and farmers, looting, plundering, raping, killing all of the men and selling the women and children as slaves (very profitable) while insisting that he got 1/5 of all of the loot and women for his harem. And he also used four other powerful tools that of not allowing change in his cult or allowing anyone to leave it under penalty of death and having anyone who disagreed with him killed. It made him king of "Arabia and when he died there was not one person left alive who he had disagreed with. Check the biographies such as the the 800 page Ibn Ishaq biography, you will see I have presented the truth.

Another tool was indoctrination and brainwashing by repetitive recitations commanded to be done many times throughout the day including body prostrations and commitment to complete submission to his will and the following of his example. Another tool is the subjugation of women and girls. His men could have multiple wives and sex with girls. Not only did his men raid peaceful villages, they killed all of the men and older boys. His men were encouraged to rape and plunder and steal all of the property. To his course warriors this was motivational and of course they found this pleasurable and lucrative. Muhammad demanded 1/5 of the loot and women for his harem. Afterwards they profited greatly from selling the captives into slavery.

Eventually they crushed Christianity in the Middle East, much of Africa and many other parts of the world. They made huge profits in selling their captives for slaves. In fact Africa was a lucrative slave trade business for them which is where many of the slaves in North America came from. This has been going on for 1400 years and continues today but to a lesser degree because so many nations have outlawed it. Saudi Arabia and most Islamic countries still practice slavery today (it is legal in Islamic Law) although they often officially deny it. (Lying and deception is condoned to further their huge cult which they now claim has 2 billion members) By the way it is a cult not a religion because although they proclaim loudly about one God they do not pray to him instead they recite indoctrination versed in Muhammad's language Arabic. They are not allowed to read the Quran in any language except Arabic. Instead of praying to god rather recite verses in Arabic and are taught follow Muhammad's example in all things not God. Of course, they claim Mohammad's actions are the perfect example of what God wants them to do. (His actions included beheadings, rapes, stealing, ordering murders,

having sex with his daughter in law, looting and pillaging etc. having sex with a little girl) They are forbidden from speaking doubt about their cult or of criticizing Muhammad under penalty of death. Change, even creating a moderate Islam is forbidden. Any words spoken to the contrary is called blasphemy and is punishable by death. Women must give their husbands sex upon demand and may not divorce or marry on their own. Wives may be beaten. There have been hundreds and perhaps even thousands of so called honor killings.” If a teen daughter, sister, or wife becomes too Westernized, takes off her head covering or gets raped she may be painfully stoned to death or killed. Girls may be sold off into marriage at any age by a father, uncle or brother. Muhammad married a little girl at age six and had repeated sex with this little girl at age 9. Because Muhammad is considered the perfect example by cult members it is legal for men to marry girls of any age and have sex with them at age 9 even today. This is being done in the USA secretly because if discovered they would be prosecuted. But an “honor accident” would kill her first so she could not testify. In case you suspect I have exaggerated take a look at The Classic Manuel of Islamic Law 2008 printing by Keller commonly referred to as “Relinance of the Traveller”

We should expect all humans to be humane and bring no harm by their actions or inaction.

Because of warriors like Muhammad people had to arm themselves for defense of their villages. Unfortunately, there were so many warriors in every historic age that if you look at a World Almanac history of mankind you see mostly battles and wars.

We are now in a modern age where at the push of a button a million people can be killed (atomic weapons) or aid sent to starving children. But now we have governments that have laws that do not allow a group of warriors to attack a village and kill and plunder. We now in America have rule by law not by brute force and we have law enforcement and 911 with armed police to stop such things. That is until they get a majority and instill Islamic law then human rights for nonbelievers and women will be taken away. Want proof just look at any country where Islam has the majority such as Iran, Saudi Arabia, Pakistan, Afghanistan and Africa today. But look at M majority countries where Christians are still being killed. The Quran orders in 9-5 and many other verses “Slay the nonbelievers wherever you find them.” (Read it yourself. You can see I speak the truth. Now we are more aware of the global situation. We are discovering people are persons and ordinary humans no matter which country or area of the Earth they are living. This is as opposed to the past when other peoples were given subhuman names like japs, or chinks.

And humans need to understand each other especially in emergencies that is why International Vocabulary of which you already know 2000 words should be taught in all schools around the world. The situation of the person who is trying to give needed information to a doctor of policeman but doesn't speak their language has cost many lives. With the International Vocabulary (The Easiest Language) people can understand each other after studying for 10 minutes a day for a month. I have received almost 1000 letters from 80 countries and can understand every one. No English is not the universal language or easiest to learn. Now with the Internet we can increasingly talk with almost any other human on the planet. For more on this lifesaving vocabulary and language which has been suppressed here because it is so easy to learn teachers of other language don't want students to know about it because they would eventually lose their jobs. visit <http://easiestlanguage.info>

Your local fast food is putting in kiosks that take orders and make change and putting in machines to do most of the human work. Retail will have robots putting up stock and doing inventory. Lowes even has a robot that roams the aisles helping^[126] customers. It can answer hardware questions because it has been given the knowledge of many experienced hardware people. It can tell you whether the item you show it is in the store and how many are in the inventory and the price. Retail clerks are going to be laid off by the thousands. Autonomous vehicles will be putting millions of drivers out of work. Delivery vehicles with compartments that open only to the credit card used to place the order will be used to deliver things like pizza and groceries. ATMs have already replaced millions of tellers. Bots are now writing newspaper and magazine articles. Look at the video “Humans Need Not Apply”^[127] General purpose robots that can be told or shown how to do a job will be replacing thousands of blue collar jobs without creating many new jobs. Lawn mowing, carpet cleaning,

dishwashing, burger flipping, planting, crop picking, painting, stocking, medical coding, brick laying robots are already a reality. But what do we do with the thousands out of work with very few jobs to be found? 111

The Internet of Things is coming like it or not. “Things” will have computer chips and will “talk” to other things. The refrigerator will tell your smart fone (modern spelling) what needs to be ordered from the grocery store and the fone will automatically order those items to be picked up by your autonomous car. Your house will automatically adjust the temperature, lights, music etc. or you can just speak to your house and request it to make changes you want.

In the not to distant future our robots will be given more and more artificial intelligence. Some scientists have warned that they should not be made autonomous (ability to act on their own and perhaps think for themselves) because these robotic children may become immortal robots with intelligence surpassing humans and if given power and unless humans stop acting foolishly could these intelligent machines take over the planet? On the other hand they could be programmed like Gort (in the movie “The day the Earth stood still.”) to be a super robo-cop and disarm bad guys and those who use violence. Could we create robot policeman to protect the peace?

In today’s schools the students sometimes run the class. The disruptive and bully students get away with things because the teacher is not allowed to discipline them. Example when I was a substitute teacher at Lincoln Junior High School many times students would be disruptive or even start fighting with another student. Teachers were under orders not to touch students, and not even to yell at them. The teacher was not allowed to leave the room. There was no phone in the room so the only thing a teacher could do was to send a student to the office to get the principal. Which I did. However, the student returned and told me that the principal was not in the office and it would be awhile before he could get there. There also were no security guards in the school. So how am I to teach a lesson with two or three or more kids seriously hurting each other, blood going all over the place. And this type of event was not uncommon. Give authority back to the teachers. Discipline does not mean hitting students just expecting students to busy themselves in learning not in bullying or disturbing others. Having a firm conversation with them and telling them that if they don’t get to work they will be sent to the office. Principals can put them in a detention room or suspend them from school which is to many kids is just what they want. They can go home and play, goof off, watch TV etc. Teachers should be allowed to send disruptive students out of the classroom. The teachers are afraid of the principal, the principal of the school board and school board of lawsuits but the kids can and do get away with almost everything short of murder. Kids are even allowed to get parents or teachers in trouble by making false reports. Many teachers have been suspended and even lost their jobs due false reports because the school board or principal is protecting themselves from possible lawsuits. I have omitted several real-life examples.

We need to optimize learning both at school and home. In schools at present less than 10% of the time involves actual learning. At home much good learning time is wasted by not encouraging and providing students with good online learning and educational games. Lack of good parenting is a major cause of poor learning. Just setting the TV to only allow PBS educational programs to children takes a few minutes but can pay off. Just having the expectation given to children that their job is to learn. Even just asking every school night” OK What did you learn today?” Can have a positive effect.

Requiring final exams for all grades and or classes sends a message to students that they are there to learn and it is expected. Too many students are goofing off and not learning. I know I have taught at every grade level.

Schedule learn times to include some summer learning classes. Many students do not get adequate food and sleep. Positive expectations for students and encouragement are big motivators. Offering rewards can also help. Many of us feel educational texts and materials should be placed on library, school and college websites and made freely available rather than spending hundreds on heavy expensive out of date textbooks.

Teach what is important for life and more science. Many graduates cannot make change without a calculator, can't find the USA on a blank world map, can't list the rights in the Bill of Rights and don't know many things that are basic to success in life, including: First Aid, basic child care, sanitation, how to care for a car including change a tire, make common needed household repairs such as fix a running faucet, survive in cold and heat. Learn the basics about food poisoning, how to put out a fire and how to safely handle gasoline. Learn basic electronics and other important technology knowledge they will need in our technological world, learn how to take care of infants and learn why they need to stay away from unprescribed drugs.

Provide Free 2 years college or vocational training and provide internships. Our youth could then be supporting themselves. A summer technology camp similar to a boot camp could provide students with knowledge and experience in many needed areas and add to their maturity and ability to work with others and better prepare them for being a productive citizen with basic knowledge that can be used with many occupations.

The trans-human era is beginning. We already have hip, and eye implants and soon there will be other artificial body parts. Computer chips and medical devices inside the head are already being used to tame Epilepsy and Parkinson's. Soon they will cure blindness and deafness and supplement our sight, memory, hearing and do other things for us. Human life expectancy will increase. Robotic exoskeletons allow humans to lift heavy weights.

Wonderful shopping and office malls can also be placed underground where the temperature is even without need for air or heating. No ice, snow, rain, wind or excessive heat or cold. All could be easily accessible to seniors and disabled by safer weather free subways. And after building, these are inexpensive to maintain as no heating or cooling no roof repairs is needed.

Geodesic Domes offer great possibilities. They can also be made extremely strong and very light weight.^[122] They can be made tornado and hurricane proof. We may eventually use super strong graphene which is about 100 times stronger than the strongest steel but lighter and thinner than the thinnest sheet of plastic.^[123] New advances in Solar panel material for example using Perovskite will allow them to be transparent and used in windows or Geodesic Domes. Thin and light weight, much less expensive, printed by an ink jet printer with layering will allow the capture of most of the light spectrum greatly improving efficiency. These will be able to generate free energy from light. Stick them to present windows. Light weight domes could make electricity by day and be used to grow food day and night in cities on rooftops. Local food is better quality food no preservatives and cheaper as no shipping. It is dependable is safer, more nutritious, and helps the local economy. Local production of our food can be done even using abandoned lots and buildings. This could be used to create more public service jobs. If scientific production methods are used more food can be produced in the cities with greater yields. Insist on better city planning, less cement and more human friendly environment. Create areas of beauty, farms and gardens children can visit and learn from.

Learning from history can prepare us for the future. Science is the best method to find how, why and what. Basically, it is looking for truth not uneducated opinions. Computers and humans need actual and factual information. If garbage is put in garbage comes out. How does one get good information? First be skeptical don't believe everything you hear and see at face value. The world is full of half truths and misinformation. Ask enough questions to get good understanding. Then verify things with reliable sources. Make sure it is up to date. Then we ask how to apply this knowledge to help all of mankind. Humans are Humane monsters (psychopaths) aren't.

On 9-11 2001 nearly 3000 innocent Americans died in the 2nd WTC attack. The 1st was 2/26/93 also by Islamists killed 6 injured 1000. There have been many more (Times Square bomber, under-wear bomber over Detroit, hundreds of us could have been killed. shoe bomber, Boston Marathon bombers, beheadings of innocent Americans. Daniel Pearl an American journalist, James Foley, American contractors) and dozens of humanitarian workers helping to save lives brutally killed often their heads cut off. Now mall bombings and car bombings are threatened here and have already happened in other parts of the world by jihadis. Why have there been hundreds of suicide attacks since 9-11? See <http://www.thereligionofpeace.com> And they're here and in growing numbers. Please stop the bombings and killing.

Because the Saudis are part owners of our media you have not been told many facts due to "political correctness" This continues to be a real potential threat.

Please stop the killing, abuse of women and girls, servitude and oppression. Too many thousands of our young people have been murdered NEEDLESSLY. Since 2001 over 10,000 Americans have been killed by jihadis with 56,422 Americans wounded.^[170] There have been thousands of attacks by Islamic Terrorists (worldwide) since 9-11 Why? The Quran orders them to kill non-believers in many^[120] verses. Verify it for your yourself. Here are a few: 2:189-191, 9:5, 9:11-14, 9:57, 47:4, 9:29, 3:84, 66:7, 8:66, 2:216, 4:89, 8:60, 2:193, 2:222 and more. You can verify this yourself. They are promised to go to heaven if they die in an attack. And this has been an accepted^[118] practice started by their founder and approved and continued by their leadership for 1400 years, continuing into the present. This is why there are so many suicide attacks and killings. For more

information and list of actual attacks see <http://thereligionofpeace.com> We have proof of many killings and abuse of women and girls^[119] And increasing numbers of attacks on Americans and innocent people in the USA and around the world by jihadis.^[2019] Facts are facts. Please help stop the killing, abuse of women and girls, servitude and oppression

Freedom Isn't Free. Many paid with their lives or fought for yours. Remember them. Help stop censorship. Promote freedom of speech and of media. Keep informed as there are others who want to take away your freedom. Don't allow them to pass laws that limit free speech such as anti hate speech laws. It seems good but is a ruse that allows anti freedom groups to grow. Some countries in Europe made that mistake and speakers have been fined for speaking the truth or criticizing terrorist ideology.

Also is the failure of both Michigan and federal legislators to demand that corporations pay their fair share. Many businesses pay no tax at all such as GE, Bank of America this puts an unfair burden on us workers.

In Michigan the Swiss Nestle company makes billions by selling Michigan water it gets for \$200 a year. Yet because of bribes many Michigan legislators refuse to allow even a small tax on this water which could help fix our bad roads.

Create a better human of the future thru better parenting. Encourage schools to offer parenting classes for all who need them. Treat children fairly and teach them to be fair. Gradually give children responsibilities such as little chores that gives them the satisfaction of doing something. Teach them to be responsible for doing them and be responsible for their actions. Read to little ones daily. Make them feel loved. Visit the library and get them children's books so they learn the excitement in learning. Learning from Internet has great possibilities.

We have created abundance for all as most everything can be mass produced and made recyclable all at lower cost. Look at a Walmart. They have most everything anyone needs except affordable housing. And we can mass produce prefab modular affordable housing nationwide that can just be set into place and fastened together saving time and labor. We can also consider those excess big shipping containers. Cut in a door, paint and set on cement blocks. Add more for more rooms. Create ample housing so no human has to be homeless. This will create jobs.

Insist on a flat income tax of 1% on all income over \$24,000 no loopholes. Include corporations. Insist on a 1% tax on the price paid in all stock purchases. No loopholes. This means the rich and corporations would finally pay their fair share rather than the billions in welfare given to them now by the bribed Congress. Also the rich bankers and "Fed," which is actually private rich bankers, who make millions tax free on interest now by loaning the government money and promoting wars for profits.

The government's main job is to provide for the safety, health and general welfare of all of citizens. It should be the employer of last resort with workfare replacing welfare. Everyone who wants to work should receive training and a public service job and be paid at the job. Fathers must support their children not force you and me to.

Promote human rights to all Take a look at the Universal Declaration of Human Rights which lists 28 human rights.

We need to stop pollution. Using solar panels and electric cars and scooters would be a great step. Tell Congress STOP WASTING OUR TAX MONEY. End Congressional life pensions. They should have to live on the same social security as we do and have the same health care. Pass The 28th Amendment: Congress shall not pass or keep any laws that they exempt themselves from or any laws that give them or corporations special benefits that are not given to citizens.

Adequate medical care is now a modern human right that should be provided by governments and supported by taxes. If other poorer countries can have good health care for all so can we. And most of those do provide better care overall. Medicare for all works because it eliminates the excessive gouging of patients. We need to stop the gouging by medical companies. Americans pay 2 to 50 times what people in other countries do. Drug corps and hospitals charge whatever they can get away with. Often a Ten cent pill is billed as a charge of multiple dollars. As a social worker I was often told that doctors would stop by a room, mark dittos on the chart and leave without really evaluating the patient's condition and treatment. Then the patient gets a \$50 dollar bill for this 30 second stop by the doctors. Since big pharma cannot police itself government should regulate them. Hospital and drug prices should be make public not hidden as they are now

Victims should be compensated for their loss by the criminals. For some instead of locking them up costing us \$40,000 a year put a tether on them and make them work and pay back the victim.

Jail inmates should be required to do public service work. Tracking tethers can be used to keep track of their location. It costs us \$40,000 a year to provide criminals with room and board with free medical care and legal advice all at our expense. You and I are sentenced to a life of work why should felons get a free ride. There are lots of public service jobs they can do such as picking up trash, mowing, weeding, helping with construction and fixing the roads. If they are a flight risk, they can be given public service work inside the prison, computer work, making license plates etc. They could help construct needed subways and install solar panels. It is a win win for all. Taxpayers save money and inmates learn job skills rather than how to get away with more crimes. Career criminals should be deported to an isolated pacific island saving us money and getting rid of the criminals as many commit more crimes when they get out.

End the \$2,000 monthly gift to aliens. Use workfare instead. Deport those aliens who do not learn to speak English and support themselves and become Americans. Deport those who believe in that ideology that is anti American and anti human rights. Encourage them to move to countries which support their ideology (which supports killing of nonbelievers, women as semi-slaves and sex with 9 year old girls) Accept our American Ideals and way of life or leave. Note their actions in countries in which they have a majority such as Iran, and Pakistan as their actions speak louder than their lies. Don't forget 12,000 Americans have been killed by them since 2000. End "Honor Killings" Do not allow child brides or abuse of girls or women. Sharia law is Anti the American way of life. Besides Let's support our own American citizens first. We already have homeless veterans, seniors (who have paid taxes for decades) and local citizens that need help.

Insist employers pay employees a living wage, with adequate hours and profit sharing for employees. Create jobs for all who need them at least minimum wage for public service work. There are a lot of things that need to be done: picking up trash, mowing, weeding, helping seniors and disabled, repairing roads, building low income affordable apartments for the homeless, veterans, senior citizens. Installing solar panels on them and on all senior and public housing. Replace welfare with workfare. Insist on workfare which requires recipients to do public service work and receive training, so they work their way off of it. Stop hunger, homelessness, illness by providing food, shelter and medical care for the needy. Provide jobs training. And provide public service placement training or an internship for a few months then require they pay back by working in these fields in Michigan. We then get the unemployed working supporting themselves and their families and paying taxes. Everyone must be required to support themselves after childhood and not rely on you and me to support them. Government can be the employer of last resort.

Put an end to foreign wars. Use UN troops to end wars. Take the profit out of war. End the unfair electoral college. Allow voters to vote early or electronically using secure block chain or other high security or absentee ballots. Require ID to stop vote fraud such as the thousands of dead voters voting.

Since the wall street crash of 2008 99% of all new income has gone to the top 1%. Today in the USA the top 1% earns more income than the bottom 50%. They are hogging the profits and not giving the real workers their fair share for their work. The working class has become the forgotten class. Lower the excessive Michigan car insurance rate.

All utilities including phone and cable should be nonprofit. Half of the residents in our city are below the poverty level while corporate officers get millions a year in salary. Thousands of children here do not have adequate food, dental care, medical care, and quality education.

Let me know what you think I value your opinion. send e-mail to wecare@dogoodforall.today We need to become informed and take action. Just like the putting off of medical research on things scientists warned us that were a potential serious threat as was done with the 5 earlier corona viruses and then not containing it. If we don't act responsibly and scientifically, with wise management we may have to pay dearly like we are doing with COVID-19.

Best Wishes. Professor Wesley E. Arnold Humanitarian educator
