

'You go to help the wounded and you don't stop to think about it'

Warren man served as a medic on the battlefields of Europe.

By Tom Watts
Bart Miller

George Schultz's parents always had nothing to do with smoking across continents or crossing the world's oceans for him. After all, Schultz never had time to also read that what he was doing on June 6, 1944.

"You're not here. You go to help the wounded and you don't stop to think about it. If you did, you probably died," said Schultz, a

GEORGE SCHULTZ during World War II

In profile, I stayed at his side until the poor fellow died. There was nothing left but his

Many have died for our freedoms. We should honor our soldiers and be vigilant, informed and be prepared.

The Warren census of 2000 showed 138,247. **American technology was being given away to foreign interests or stolen.** Often this happened from the Internet. In the 2000s Warren continued to lose jobs. The business was being sent overseas. Parts and other things were increasingly manufactured in other countries. **It was impossible to buy a TV set, camera, VCR, DVD player or consumer electronic device that was manufactured in the USA.** By 2007 Warren's unemployment was the worst in the nation.

Things were so bad that people started to move out of the state, even college graduates, to find jobs. Many of those who were unemployed lost their homes. The federal government refused to extend unemployment benefits while members of congress gave themselves big pay raises and benefits and wasted billions of our dollars. Then they bailed out the rich bankers and allowed China to buy the debt. China will use the interest to support its growing military and perhaps surpass us as a world power. Then the **bankers raised our interest rates.**

Federal government programs started recording everyone's telephone and Internet usage. Parts of our Bill of Rights were nullified by the Patriot Act of 2001 and 2006 allowing the Government to search anyone's home. The Military Commissions Act of 2006 allowed anyone to be arrested and took away your right to a hearing and trial under some conditions. Big databases were beginning to keep track of everyone and almost everything including your birth date, drivers license number, locations, fotos, Social Security Number, plus your credit card, pay, bank transactions, phone and internet usage. Camera output in public areas and streets and stores can be fed into face recognition programs. Tiny RFID chips a small as the dot on this i are about to be placed in almost everything even your clothing, food, medicine (will save lives) but will soon allow almost everyone and everything to be tracked and located by sensors placed in public places. Do a Google search on "mu chip" This will be great for fast checkouts at stores and inventory and anti theft control. You can get chips with transponders to track your dog, car, kids, and spouse. But will it possibly allow Big Brothers to take control by being able to track anyone who speaks up against them and put bad info in credit report (which is very time consuming to repair) causing declines of purchases even on "good" cards. Some of this has already happened. College students have sat in a public places and read these chips. So much for privacy. See the movie "Enemy of the State." The Internet connection of your things is also coming. I am a college professor and teach technology. I don't want my car hooked up to the Internet so someone may hack into it and control it. This is real, not fantasy. Go look at the facts on all of the above. See for yourself.
